

Linear predictor $\text{logit}(\mu)$ in the model

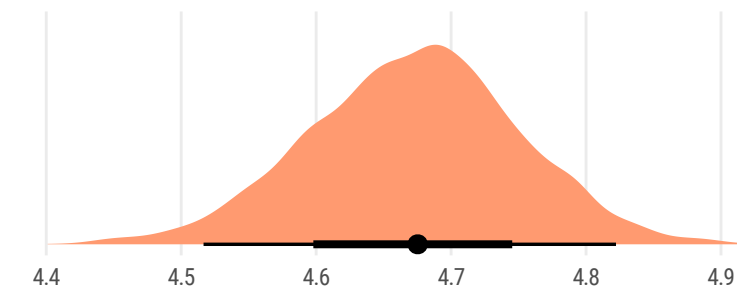

```
posterior_linpred(  
  ..., tibble(flipper_length_mm = 201))
```

Logit-scale ratio of bill depth / bill length

Precision parameter $\text{log}(\varphi)$ in the model

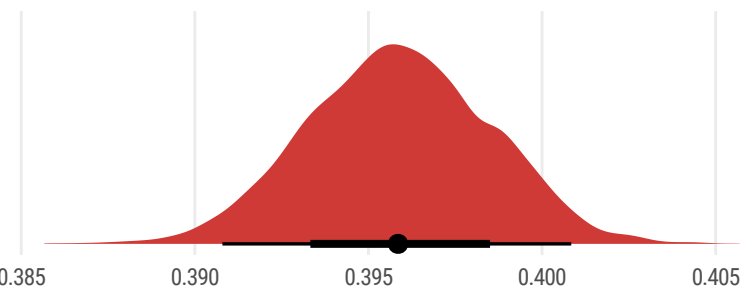

```
posterior_linpred(  
  ..., tibble(flipper_length_mm = 201),  
  dpar = "phi")
```

Log-scale precision parameter

Expectation of the posterior $E[y]$ or μ in the model

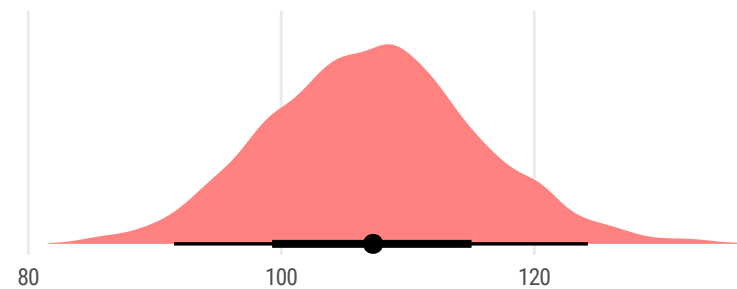

```
posterior_epred(  
  ..., tibble(flipper_length_mm = 201)) # or  
posterior_linpred(..., transform = TRUE)
```

Ratio of bill depth / bill length

Precision parameter φ in the model

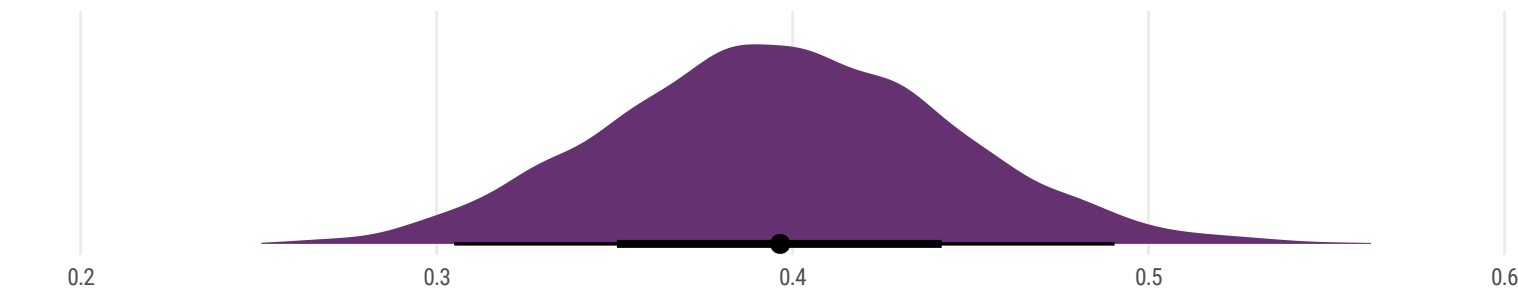

```
posterior_linpred(  
  ..., tibble(flipper_length_mm = 201),  
  dpar = "phi", transform = TRUE)
```

Precision parameter

Posterior predictions Random draws from posterior $\text{Beta}(\mu, \varphi)$

```
posterior_predict()
```

Ratio of bill depth / bill length
